

Preparing for the hot weather

1 Introduce water saving information and employee awareness on using water wisely.

5 Low flow showerheads reduce the amount of water used, whilst still giving you the feel of a normal shower.

2 Do not leave taps running.

6 Do not waste water on ground maintenance, consider installing water butts.

3 Repair any dripping taps and faulty ball valves.

7 Try to reduce vehicle or window washing. Can you recycle the water?

4 Fix water saving devices in your toilet systems, such as "Hippo's" or "Save a Flush".

8 Monitor your water usage, take regular meter reads. An increase may indicate a leak on your supply.
